

➤ ADMISSION REQUIREMENTS

A candidate who has previously completed undergraduate academic studies (bachelor's degree studies) of at least 240 ECTS credits, at a faculty in the field of technical-technological sciences, natural-mathematical sciences and/or medical sciences, is eligible to enroll in master's degree academic studies.

➤ Entrance exam

The entrance exam for this study program consists of three courses: Fundamentals of Forensic Sciences, Physical Chemistry, and Mathematics.

A candidate can score 0 to 20 points in each of the three courses. The candidate has passed the entrance exam if they receive 11 or more points in each course.

Each exam is eliminatory, with no possibility of retaking.

➤ CANDIDATES RANKING CRITERIA

The ranking of candidates for enrolment in master's degree academic studies is determined based on the sum of points rounded to two decimal places achieved based on:

- GPA achieved at the four-year undergraduate academic studies (bachelor's degree studies), according to which a candidate can achieve a maximum of 40 points by multiplying the GPA at the previous cycle of study by 4, and
- Points achieved at the entrance exam – up to 60 points.

Length of study is utilized as an additional criterion for enrolment in master's degree academic studies when the point totals of two or more candidates are equal. Priority is then granted to the candidate who successfully concluded the prior cycle of study in a shorter period of time.
